

HUTCHINSON SUMP PUMP INVENTORY PROGRAM

SUMP PUMP INSTALLATIONS

Correctly Installed

In a correctly installed system, a rigid section of pipe, such as PVC, takes water from the sump pump, through the basement, and deposits it outside the home or business.

Incorrectly Installed

Incorrectly installed or cross connected sump pump systems drain to the sanitary sewer. Sometimes the tile line is routed directly to the floor drain and not into a sump pit. This is also a illegal cross connection.
